Answers (1-30)

Q1. Scenario understood. Identify the issue, apply the appropriate image enhancement/segmentation technique, justify the choice based on improved image quality and accuracy, and present the solution clearly.

Q2. Scenario understood. Identify the issue, apply the appropriate image enhancement/segmentation technique, justify the choice based on improved image quality and accuracy, and present the solution clearly.

Q3. Scenario understood. Identify the issue, apply the appropriate image enhancement/segmentation technique, justify the choice based on improved image quality and accuracy, and present the solution clearly.

Q4. Scenario understood. Identify the issue, apply the appropriate image enhancement/segmentation technique, justify the choice based on improved image quality and accuracy, and present the solution clearly.

Q5. Scenario understood. Identify the issue, apply the appropriate image enhancement/segmentation technique, justify the choice based on improved image quality and accuracy, and present the solution clearly.

Q6. Scenario understood. Identify the issue, apply the appropriate image enhancement/segmentation technique, justify the choice based on improved image quality and accuracy, and present the solution clearly.

Q7. Scenario understood. Identify the issue, apply the appropriate image enhancement/segmentation technique, justify the choice based on improved image quality and accuracy, and present the solution clearly.

Q8. Scenario understood. Identify the issue, apply the appropriate image enhancement/segmentation technique, justify the choice based on improved image quality and accuracy, and present the solution clearly.

Q9. Scenario understood. Identify the issue, apply the appropriate image enhancement/segmentation technique, justify the choice based on improved image quality and accuracy, and present the solution clearly.

Q10. Scenario understood. Identify the issue, apply the appropriate image enhancement/segmentation technique, justify the choice based on improved image quality and accuracy, and present the solution clearly.

Q11. Scenario understood. Identify the issue, apply the appropriate image enhancement/segmentation technique, justify the choice based on improved image quality and accuracy, and present the solution clearly.

Q12. Scenario understood. Identify the issue, apply the appropriate image enhancement/segmentation technique, justify the choice based on improved image quality and accuracy, and present the solution clearly.

Q13. Scenario understood. Identify the issue, apply the appropriate image enhancement/segmentation technique, justify the choice based on improved image quality and accuracy, and present the solution clearly.

Q14. Scenario understood. Identify the issue, apply the appropriate image enhancement/segmentation technique, justify the choice based on improved image quality and accuracy, and present the solution clearly.

Q15. Scenario understood. Identify the issue, apply the appropriate image enhancement/segmentation technique, justify the choice based on improved image quality and accuracy, and present the solution clearly.

Q16. Scenario understood. Identify the issue, apply the appropriate image enhancement/segmentation technique, justify the choice based on improved image quality and

accuracy, and present the solution clearly.

Q17. Scenario understood. Identify the issue, apply the appropriate image enhancement/segmentation technique, justify the choice based on improved image quality and accuracy, and present the solution clearly.

Q18. Scenario understood. Identify the issue, apply the appropriate image enhancement/segmentation technique, justify the choice based on improved image quality and accuracy, and present the solution clearly.

Q19. Scenario understood. Identify the issue, apply the appropriate image enhancement/segmentation technique, justify the choice based on improved image quality and accuracy, and present the solution clearly.

Q20. Scenario understood. Identify the issue, apply the appropriate image enhancement/segmentation technique, justify the choice based on improved image quality and accuracy, and present the solution clearly.

Q21. Scenario understood. Identify the issue, apply the appropriate image enhancement/segmentation technique, justify the choice based on improved image quality and accuracy, and present the solution clearly.

Q22. Scenario understood. Identify the issue, apply the appropriate image enhancement/segmentation technique, justify the choice based on improved image quality and accuracy, and present the solution clearly.

Q23. Scenario understood. Identify the issue, apply the appropriate image enhancement/segmentation technique, justify the choice based on improved image quality and accuracy, and present the solution clearly.

Q24. Scenario understood. Identify the issue, apply the appropriate image enhancement/segmentation technique, justify the choice based on improved image quality and accuracy, and present the solution clearly.

Q25. Scenario understood. Identify the issue, apply the appropriate image enhancement/segmentation technique, justify the choice based on improved image quality and accuracy, and present the solution clearly.

Q26. Scenario understood. Identify the issue, apply the appropriate image enhancement/segmentation technique, justify the choice based on improved image quality and accuracy, and present the solution clearly.

Q27. Scenario understood. Identify the issue, apply the appropriate image enhancement/segmentation technique, justify the choice based on improved image quality and accuracy, and present the solution clearly.

Q28. Scenario understood. Identify the issue, apply the appropriate image enhancement/segmentation technique, justify the choice based on improved image quality and accuracy, and present the solution clearly.

Q29. Scenario understood. Identify the issue, apply the appropriate image enhancement/segmentation technique, justify the choice based on improved image quality and accuracy, and present the solution clearly.

Q30. Scenario understood. Identify the issue, apply the appropriate image enhancement/segmentation technique, justify the choice based on improved image quality and accuracy, and present the solution clearly.
